

● THE STARTER KIT · NO. 01

3 AI Workflows for Small Business Owners. *Save 10+ hours a week.*

A 14-page editorial guide. Real prompts, real screenshots, real outcomes. Plus one bonus workflow nobody else is teaching.

14 pages **10-min read** **\$0** tools required **Free** forever

Alice Bazdikian

AI Strategist · 200+ entrepreneurs trained

smallbusinessaicoach.com

You've been told AI will change your business. *Then you tried it.*

Most "AI for small business" content is a 47-tool listicle, a 12-minute YouTube tour, and a generic "10 prompts to copy-paste" carousel that reads like the same thing 200 other people posted. None of it ships a single workflow into your actual business.

I read what small business owners actually post about AI on Reddit. The same four pains keep showing up:

“*I'm drowning in manual work. We manually enter every supplier invoice and then manually log into the bank to set up every single payment.*

BUSINESS OWNER

“*Emails, tasks, follow-ups. Everything ends up scattered. Sometimes I forget to follow up, sometimes tasks just stay in my head.*

SERVICE BUSINESS OWNER

“*I'm not sure how much actually translates into real results. Am I building a real business or just looking like one?*

ACCOUNTING FIRM OWNER

“*I want to spend my time on creative work, not admin. I need things that are easy to set up and hard to break.*

SOLOPRENEUR

*These three workflows are the ones I install with my Accelerator clients first. They map directly to those four pains. **Steal them.** If you read carefully, there's a fourth bonus workflow waiting near the end, that one's for the manual-invoice problem.*

What you need to get started.

Be honest with you up front: you can run one of these workflows on the free Claude tier, but to run the whole stack the way I do, you need **Claude Pro at \$20/month**. That's the only paid tool in this entire kit.

⚡ THE TOOL

Claude.ai • Pro plan • \$20/month

Everything in this kit runs on **Claude.ai** (the web app at claude.ai, on your laptop or phone browser, no install). Workflows 01, 03 and 04 use the regular **Chat** interface. Workflow 02 uses **Projects**, which is a Pro-only feature. We don't use Claude Code (that's a CLI for developers).

The honest answer: pay the \$20/month. It's the cheapest one-employee you'll ever hire.

Sign up at **claude.ai**, then upgrade to Pro from your settings

🕒 THE TIME

≈ 30 minutes total • spread across a week

10 min for the inbox triage prompt. 15 min to build your Claude Project. 5 min for the marketing loop. Don't try to set up all four in one sitting. Pick the workflow that matches your loudest current pain (most owners pick Workflow 01) and ship that one this week.

📱 FOR THE BONUS WORKFLOW

A phone scan app • free

Workflow 04 (the Invoice Killer, page 12) needs OCR'd invoice text. Apple Notes (iPhone) and Google Drive (Android) both scan and OCR for free. Adobe Scan and CamScanner work too. Don't buy anything new for this.

🧠 THE SKILL

None.

If you can copy-paste an email and click Send, you can run every workflow in this kit. No code, no APIs, no integrations to wire up. The hardest part is deciding to start.

⚡ WHY I'M TELLING YOU THIS UP FRONT

Most "free AI guides" hide the fact that you need a paid plan. By page 7 you've spent two hours setting things up and then hit "this requires Pro." That's not how I want to start with you. The math: **\$20/month** for 12+ hours saved per week. That's \$0.04/hour. The cheapest hire of your life.

01

WORKFLOW ONE

The Inbox Triage Workflow.

Turn 90 minutes a day on email into 15. One prompt classifies, drafts replies, and flags what's actually urgent.

SAVES ≈ 5 HRS/WEEK

SETUP: 2 MIN

TOOL: CLAUDE.AI (CHAT) · PRO \$20/MO

You'll recognize this if...

- ✓ You spend 60–120 minutes a day reading email and answering the same kinds of questions over and over.
- ✓ You've tried "inbox zero" and it lasted 4 days.
- ✓ You miss replies you meant to send because the email scrolled out of sight.
- ✓ You write the same "thanks, I'll take a look" reply 8 times a day.

The exact prompt (copy-paste).

► PASTE INTO CLAUDE · THEN PASTE 5–10 EMAILS BELOW IT

You are my email triage assistant. I'm pasting in 5–10 emails I haven't replied to.

For each email, do this in order:

1. CLASSIFY into one of: REPLY-NEEDED · FYI · ARCHIVE · DELEGATE
2. RANK urgency: HIGH (today), MEDIUM (this week), LOW (whenever)
3. If REPLY-NEEDED: draft a 2–3 sentence reply in my voice (warm, direct, no "I hope this finds you well")
4. If anything is time-sensitive (deadline, meeting, payment), flag it at the top with ⚠

Output as a clean table I can scan in 30 seconds:

#	From	Subject	Class	Urgency	Suggested reply (if any)
---	------	---------	-------	---------	--------------------------

End with a one-line summary: "X to reply to today, Y to skim, Z to archive."

EMAILS:

[paste below]

What it looks like running.

claude.ai · The Inbox Triage Workflow · output

Inbox triaged · 8 emails · 30 seconds

#	FROM	SUBJECT	CLASS	URG.	SUGGESTED REPLY
1	Sarah · client	△ proposal q's before Fri	REPLY	HIGH	"Sarah, sending revised scope by Thu EOD. Two questions on timeline coming separately."
2	Stripe	Payment received · invoice #2104	ARCHIVE	LOW	—
3	Mark · supplier	April invoice attached	DELEGATE	MED	Forward to bookkeeper. Use Workflow 04 (Invoice Killer).
4	LinkedIn	5 new connection requests	FYI	LOW	—
5	Jen · prospect	Discovery call follow-up	REPLY	HIGH	"Jen, great chat. Calendar link below for next Tue or Thu — 30 min works."
6	Substack	Newsletter scheduled	ARCHIVE	LOW	—
7	Amir · partner	Webinar promo swap	REPLY	MED	"Amir, yes to swap. Send your blurb + dates and I'll mirror."
8	Calendly	New booking · Mon 3pm	FYI	MED	Auto-confirmed. Send pre-call note.

3 to reply to today · 2 to skim · 3 to archive. ≈ 30 seconds vs 18 min reading them all manually.

What the output looks like. Claude returns a triaged table with classifications, urgencies, and draft replies. ≈ 30 seconds for 8 emails.

How to know it's working.

- ✓ **Day 1:** 8 emails triaged in under a minute. You only write 2 replies from scratch instead of 8.
- ✓ **Day 3:** You check email twice a day instead of every 20 minutes. Your "to-reply" list lives in Claude, not your head.
- ✓ **Week 2:** The "what was I supposed to follow up on?" anxiety stops. ≈ 5 hours back per week.

⚡ MAKE IT STICKIER

Save the prompt as a Claude Project (Pro). Now you can paste the emails straight in without re-pasting the prompt. Add your business voice as a memory ("I run a 6-person dental practice; reply with that context") and Claude tunes drafts to your tone forever.

△ THE HONEST CAVEAT

Don't auto-send drafts. Read each one before clicking send. AI is good at $\approx 80\%$ of replies; the last 20% is still you reading the tone of the relationship. Five seconds per draft beats five minutes typing it from scratch.

02

WORKFLOW TWO

The SOP-to-AI-Trainer Workflow.

Stop re-explaining your business every time you talk to AI. Train it once, with a doc you already have. Reuse it forever.

SAVES ≈ 3 HRS/WEEK

SETUP: 15 MIN, ONCE

TOOL: CLAUDE.AI (PROJECTS) · PRO \$20/MO

You'll recognize this if...

- ✓ Every time you ask AI for help, you re-paste the same context (your business, your customers, your offers, your voice).
- ✓ You've asked AI for "an email like the one I sent last week" and it had no idea what you meant.
- ✓ You have an SOP doc, an onboarding guide, or a brand voice doc sitting in Google Drive you haven't opened in 4 months.
- ✓ You think "if I could just clone my business knowledge into AI once", that's exactly what this does.

The exact setup (15 minutes, once).

1. **Open Claude.ai.** Click the "Projects" sidebar (Pro feature, \$20/mo).
2. **Create a project** called "[Your Biz] Knowledge Base."
3. **Upload your existing docs:** SOP / onboarding guide / brand voice / pricing / FAQ. PDFs, Google Docs (export as PDF), or .txt all work.
4. **Paste this system prompt** in the project's "Custom instructions" box (see prompt below).
5. **Start a new chat in that project.** From now on, every message uses your docs as context automatically.

The system prompt.

► PASTE INTO THE PROJECT'S "CUSTOM INSTRUCTIONS"

You are my AI assistant for [BUSINESS NAME].

The attached docs describe how my business actually runs:
who my customers are, what I sell, my brand voice, my pricing,
my SOPs, and what I will NEVER do.

Rules for every reply:

1. Use the docs as the source of truth. If something contradicts the docs, the docs win.
2. Match my brand voice from the writing samples. Specifically: [warm, direct, plain-language; no jargon; no "in today's fast-paced world"; no "leverage"; no "synergy"].
3. If I ask for something the docs don't cover, say so before guessing.
4. When I ask for a draft (email, post, proposal), output it ready to send/publish, not a 500-word explanation of how to write it.
5. If the request involves money, contracts, or legal, flag it and tell me to verify before sending.

What it looks like running.

What the setup looks like, a Claude Project with your SOPs uploaded. Every chat in the project pulls from the docs automatically.

How to know it's working.

- ✓ **Week 1:** Replies sound like YOU wrote them. You stop deleting AI's "I hope this finds you well" preambles.
- ✓ **Week 2:** You ask "draft a follow-up to the proposal I sent the Tuesday client" and Claude knows what you mean.
- ✓ **Week 4:** You realize you've stopped pasting context into every AI conversation. ≈ 3 hours/week back.

⚡ BONUS MOVE

Add your last 5 best-performing pieces of content (LinkedIn posts, emails, sales pages) to the project. Now Claude can write IN your voice instead of generic-AI voice. This single move is what separates "AI sounds like AI" from "people don't realize this was AI-assisted."

⚠ PRIVACY CHECK

Don't upload anything you wouldn't email a contractor. No client SSNs, no full credit card numbers, no medical records. Anthropic's enterprise terms cover business data, but you're still responsible for what you put in.

03

WORKFLOW THREE

The Weekly Marketing Loop.

5 reel scripts and a newsletter outline from one prompt. Built around your brand voice. Repeats every week with a single click.

SAVES ≈ 4 HRS/WEEK

SETUP: 5 MIN

TOOL: CLAUDE.AI (CHAT) · PRO \$20/MO

You'll recognize this if...

- ✓ You know you "should" be posting more, but content is the bottleneck.
- ✓ You've spent a Sunday afternoon staring at a blank doc trying to think of 5 reel ideas.
- ✓ Your last newsletter went out 6 weeks ago. You meant to write one. It just didn't happen.
- ✓ You'd rather record reels than write the scripts.

The exact prompt.

► PASTE INTO CLAUDE (OR YOUR SOP-TRAINED PROJECT FROM WORKFLOW 02)

You are my content strategist. Generate this week's content in one pass.

CONTEXT (the only thing I need to give you each week):

- This week's main topic: [TOPIC]
- The specific pain it solves for my audience: [PAIN]
- The product/offer I'm warming people up to: [OFFER]

Output, in order:

1. FIVE short-form video scripts (15–30 sec each).
Each one: a single hook line, a single beat, a single CTA.
Different angles: a confessional, a contrarian, a checklist, a story, a stat-based one.
Format each as: HOOK / SCRIPT / CTA.
2. ONE newsletter outline:
 - Subject line (under 50 chars, no clickbait, no emojis)
 - Opening line (1 sentence, hook)
 - Body (3 short paragraphs, plain language)
 - One link (to the OFFER) in the natural closing.

Write everything in MY voice (from the project docs). Plain language. No "in today's fast-paced world." No emojis in body copy.

What it looks like running.

claude.ai · The Weekly Marketing Loop · output

5 reel scripts + 1 newsletter outline · ≈ 90 seconds.

Topic this week: "How small biz owners use AI for client follow-ups." Pain: scattered, in your head. Offer: the live workshop on June 3.

5 REELS

Short-form scripts

REEL 01 · CONFESSIONAL

"I forgot to follow up with three clients last month."

"Here's the one prompt I started using so it stopped happening."

CTA: Comment 'FOLLOW' for the prompt.

REEL 02 · CONTRARIAN

"Stop building a CRM. You don't need one yet."

"If you're under 30 clients, AI + a Google Doc beats Hubspot."

CTA: Save this for the inevitable conversation.

REEL 03 · CHECKLIST

"3 things AI does better than a human assistant."

"And one thing it shouldn't touch."

CTA: Send to the friend who keeps overhiring.

REEL 04 · STORY

"My client got 12 hours back her first week."

"Here's exactly what we changed in her business."

CTA: Workshop link in bio.

REEL 05 · STAT

"4 hours a week. That's the average."

"Of what owners spend on follow-ups they could automate."

CTA: Start with this one prompt →

NEWSLETTER

Sunday send

SUBJECT · 47 CHARS · ZERO CLICKBAIT

The follow-ups you forgot last week.

OPENING LINE

"I'll bet you can name three clients you meant to circle back to last week. I can name three of mine too."

BODY · 3 SHORT PARAGRAPHS

The reason isn't memory or discipline. It's that follow-up lives in your head, where it competes with everything else for the same 15 minutes between meetings...

Last month I built a 3-prompt loop that catches every follow-up before it slips. It's not a CRM. It's a thing you already have (Claude) plus a doc you already wrote (your offer)...

If you want to build it on YOUR business with me beside you, I'm running a free 60-minute workshop on June 3.

CLOSING LINK

→ Save my seat (free) →

What the output looks like. one prompt → 5 reel scripts + 1 newsletter outline + subject line, all in your brand voice. ≈ 90 seconds.

SMALLBUSINESSAICOACH.COM

The 3-Workflow Starter Kit · Page 12

How to know it's working.

- ✓ **Week 1:** You record 5 reels in one sitting using the scripts. You ship the newsletter on time.
- ✓ **Week 3:** You stop "not knowing what to post." The bottleneck moves from ideation to recording.
- ✓ **Month 2:** Your audience starts replying "your content has been on fire lately." It has. You finally have a rhythm.

⚡ THE LEVERAGE MOVE

After every weekly run, paste your top-performing post BACK into Claude with the note "Why did this one outperform?" Over 4–6 weeks, your prompt + your project docs become a self-tuning content engine. This is also exactly what we build live in the workshop.

If you only do one of the three this week, do this one.

The Weekly Marketing Loop is the workflow most owners skip because it feels less urgent than email. It's also the one that compounds the fastest. Email saves you hours back. Marketing brings new revenue in.

If you ship 3 weeks of content using this loop, you'll have **15 reels and 3 newsletters** in the bank. That's more content than most owners ship in a quarter.

📊 THE MATH

Old way: 1 reel idea → 30 min to write the script → 20 min to record → 15 min to edit. Roughly 90 min per reel × 5 reels = 7.5 hours/week on content alone.

New way (this loop): 90 seconds to generate 5 scripts → 60 minutes to batch-record → 60 minutes to batch-edit. ≈ 2 hours/week. **Saves ≈ 4–5 hours/week.**

· End of the 3 main workflows. Keep reading for the surprise bonus on the next page.

04

BONUS WORKFLOW · SURPRISE

The Invoice Killer.

For the loudest pain on the internet: manual supplier invoices, manual VAT entry, manual everything. Stop re-typing.

SAVES 3-6 HRS/WEEK

SETUP: 10 MIN, ONCE

TOOL: CLAUDE.AI (CHAT) · PRO \$20/MO · + PHONE SCAN APP (FREE)

This one's for the small business owner from who said: *"I'm drowning in manual work. We manually enter every supplier invoice and then manually log into the bank to set up every single payment."* If that's you, this might be the most valuable 10 minutes you spend this month.

You'll recognize this if...

- ✓ You manually re-key supplier name, invoice number, dates, VAT, totals, and line items into QuickBooks / Xero / Wave / a spreadsheet.
- ✓ You chase missing receipts at month-end (and find half of them in your camera roll).
- ✓ You re-type bank account / IBAN / SWIFT details into your bank's payment portal for the same suppliers every month.
- ✓ Your bookkeeper bills you for "data entry hours."

The 10-minute setup.

1. **OCR your invoices.** No fancy tool needed. Apple Notes (iPhone scan) or Google Drive (mobile scan) both OCR for free. Bonus: Adobe Scan (free tier).
2. **Open Claude** (free or Pro). Paste the OCR'd text from up to 10 invoices in one go.
3. **Paste the prompt below.** Claude returns a clean CSV row per invoice, ready to paste into your accounting software.
4. **Review** for ambiguities (Claude flags them in a separate column). Then bulk-import.

The exact prompt.

► PASTE INTO CLAUDE · THEN PASTE OCR'D INVOICE TEXT BELOW IT

You are my accounts-payable clerk. I'm pasting OCR text from 1-10 supplier invoices. They will be messy.

For each invoice, extract:

- Supplier name
- Supplier email/phone (if present)
- Invoice number
- Invoice date (YYYY-MM-DD)
- Due date (YYYY-MM-DD)
- Currency
- Subtotal (excluding tax)
- Tax/VAT amount
- Tax/VAT rate
- Total (including tax)
- Line items (semicolon-separated: qty × description @ unit price)
- Bank details if present (IBAN/account, SWIFT/sort, BIC)

Output as a single CSV block I can paste into a spreadsheet.

First row = headers. One row per invoice.

Last column = "REVIEW_FLAGS", list anything ambiguous, missing, or that doesn't add up (e.g. tax math wrong by > \$0.10, due date in the past, supplier name unclear). Be specific.

Do NOT guess. If a field is missing, leave it blank and put "missing: [field]" in REVIEW_FLAGS.

INVOICE TEXT:

[paste OCR text below this line]

What it looks like running.

claude.ai · The Invoice Killer · output (paste-ready CSV)

10 messy OCR'd invoices → 10 clean CSV rows.

Ready to bulk-import into QuickBooks, Xero, Wave, or paste into a spreadsheet. Anything ambiguous gets flagged in the last column.

10 invoices in ≈ 90 seconds 3 flagged for review (you spot-check) Paste straight into QuickBooks

What the output looks like. 10 invoices → 10 clean CSV rows, ready for QuickBooks / Xero / Wave. ≈ 90 seconds vs ≈ 30 minutes.

△ THE HONEST CAVEAT

This is for **extraction and entry only**. You still review every row before you import to your books, and you still review every payment before you authorize it. AI is great at getting 95% of the data right, fast. The last 5% is still you. *No AI signs your cheques.*

⚡ STACK IT WITH WORKFLOW 02

Save your supplier list (with their bank details, payment terms, account numbers in your books) into your SOP-to-AI-Trainer Project from Workflow 02. Now when an invoice from a recurring supplier comes in, Claude already knows their bank details and your payment terms. The CSV is even cleaner.

Stack the four. Get a full day a week back.

Each workflow on its own ships a real win. Stacked, they compound:

- ✓ **Workflow 01** (Inbox Triage): ≈ 5 hrs/week back
- ✓ **Workflow 02** (SOP-to-AI-Trainer): ≈ 3 hrs/week back, *and* makes 01 + 03 + 04 better because everything runs in your voice with your context
- ✓ **Workflow 03** (Weekly Marketing Loop): ≈ 4 hrs/week back
- ✓ **Bonus 04** (The Invoice Killer): 3–6 hrs/week back depending on invoice volume

THE CONSERVATIVE MATH

Workflow 01 (5 hrs) + Workflow 02 (3 hrs) + Workflow 03 (4 hrs) = **12 hours a week.**

Add Workflow 04 if invoices are part of your day = **15–18 hours a week.**

That's more than two full work-days reclaimed, every week, for a one-time setup of about 30 minutes total.

The order I'd ship them in.

1. **Day 1:** Workflow 01 (Inbox Triage). Fastest setup, immediate win, builds momentum.
2. **Day 3–4:** Workflow 02 (SOP-to-AI-Trainer). The investment workflow. Sets up everything else.
3. **Day 7:** Workflow 03 (Weekly Marketing Loop). First week of content shipped on a rhythm.
4. **Day 14:** Bonus Workflow 04 (Invoice Killer). Take this on once the others are running. Don't bite off all 4 at once.

Want me to wire all four into YOUR business, live?

Reading the workflows is one thing. Building them on your actual business, with your actual docs, with someone who's done it 200+ times sitting next to you on Zoom, that's a different speed.

★ RECOMMENDED NEXT STEP · FREE

The 30-Day AI Reset for Small Business Owners.

A free 60-minute live workshop on **Wed June 3 at 6pm ET**. I run the audit on a real attendee's business and build 3 of these workflows in front of you. Live Q&A at the end. Capped at 50 live seats. Replay only for live attendees.

[Save my seat \(free\) →](#)

If the workshop tells you "yes, I want this with hands-on coaching," the next step is the paid [30-Day AI Accelerator](#) (\$1,000, weekly group coaching, 4 weeks). Don't sign up cold. Come to the workshop first.

Or just take the kit and run. No follow-up pressure. The work matters more than the funnel.
