WHY THIS EXISTS

You've been told AI will change your business. *Then you tried it.*

Most "AI for small business" content is a 47-tool listicle, a 12-minute YouTube tour, and a generic "10 prompts to copy-paste" carousel that reads like the same thing 200 other people posted. None of it ships a single workflow into your actual business.

I read what small business owners actually post about AI on Reddit. The same four pains keep showing up:

I'm drowning in manual work. We manually enter every supplier invoice and then manually log into the bank to set up every single payment.

BUSINESS OWNER

Emails, tasks, follow-ups. Everything ends up scattered. Sometimes I forget to follow up, sometimes tasks just stay in my head.

SERVICE BUSINESS OWNER

I'm not sure how much actually translates into real results. Am I building a real business or just looking like one?

ACCOUNTING FIRM OWNER

I want to spend my time on creative work, not admin. I need things that are easy to set up and hard to break.

SOLOPRENEUR

*These three workflows are the ones I install with my Accelerator clients first. They map directly to those four pains. **Steal them.** If you read carefully, there's a*

fourth bonus workflow waiting near the end, that one's for the manual-invoice problem.

What you need to get started.

Be honest with you up front: you can run one of these workflows on the free Claude tier, but to run the whole stack the way I do, you need **Claude Pro at \$20/month**. That's the only paid tool in this entire kit.

⚡ THE TOOL

Claude.ai • Pro plan • \$20/month

Everything in this kit runs on **Claude.ai** (the web app at claude.ai, on your laptop or phone browser, no install). Workflows 01, 03 and 04 use the regular **Chat** interface. Workflow 02 uses **Projects**, which is a Pro-only feature. We don't use Claude Code (that's a CLI for developers).

The honest answer: pay the \$20/month. It's the cheapest one-employee you'll ever hire.

Sign up at claude.ai, then upgrade to Pro from your settings

🕒 THE TIME

≈ 60 minutes total • spread across a week

15 min for the inbox triage prompt. 30 min to build your Claude Project. 15 min for the marketing loop. Don't try to set up all four in one sitting. Pick the workflow that matches your loudest current pain (most owners pick Workflow 01) and ship that one this week.

🧑‍💻 FOR THE BONUS WORKFLOW

Claude Cowork • in the desktop app

Workflow 04 (the Invoice Killer, page 12) runs inside **Claude Cowork**, a Pro feature in the Claude desktop app. It runs your invoicing on a schedule (monthly, weekly, whatever you set) without you having to open Claude. Already included in your \$20/month Pro plan, no extra cost.

🧠 THE SKILL

None.

If you can copy-paste an email and click Send, you can run every workflow in this kit. No code, no APIs, no integrations to wire up. The hardest part is deciding to start.

⚡ WHY I'M TELLING YOU THIS UP FRONT

Most "free AI guides" hide the fact that you need a paid plan. By page 7 you've spent two hours setting things up and then hit "this requires Pro." That's not how I want to start with you. The math: **\$20/month** for 12+ hours saved per week. That's \$0.04/hour. The cheapest hire of your life.

Open Claude. Paste a prompt. *That's it.*

Every workflow in this kit runs in one place: **Claude Desktop** (free download) or **Claude.ai** in your browser. No coding. No integrations. No extra tools to install. Two steps to your first hour back.

01 Download Claude Desktop (or use **claude.ai** in your browser).

Go to **claude.ai/download**. One-click installer for Mac, Windows. The web app at **claude.ai** works the same if you'd rather skip installing. Both let you run every workflow in this kit.

02 Click *+ New chat*, paste a prompt from this kit, then paste your inputs below it.

The "+ New chat" button lives top-left. Paste any prompt from this guide into the message box, then paste your real inputs (emails, OCR'd invoices, weekly topics) right under it. Hit send. The first reply lands in seconds.

THE PATTERN FOR EVERY WORKFLOW

Prompt on top, inputs below. The prompt teaches Claude how to think. Your inputs (emails, invoice text, weekly topic) are what it works on. Same shape every time, only the prompt changes.

01

WORKFLOW ONE

The Inbox Triage Workflow.

BONUS: SET UP AN AUTOMATED DAILY INBOX BRIEFING WITH CLAUDE COWORK

Turn 90 minutes a day on email into 15. One prompt classifies, drafts replies, and flags what's actually urgent.

SAVES ≈ 5 HRS/WEEK

SETUP: 15 MIN

TOOL: CLAUDE.AI (CHAT) · PRO \$20/MO

You'll recognize this if...

- ✓ You spend 60–120 minutes a day reading email and answering the same kinds of questions over and over.
- ✓ You've tried "inbox zero" and it lasted 4 days.
- ✓ You miss replies you meant to send because the email scrolled out of sight.
- ✓ You write the same "thanks, I'll take a look" reply 8 times a day.

The exact prompt (copy-paste).

► PASTE INTO CLAUDE · THEN PASTE 5-10 EMAILS BELOW IT

You are my email triage assistant. I'm pasting in 5-10 emails I haven't replied to.

For each email, do this in order:

- 1. CLASSIFY into one of: REPLY-NEEDED · FYI · ARCHIVE · DELEGATE
- 2. RANK urgency: HIGH (today), MEDIUM (this week), LOW (whenever)
- 3. If REPLY-NEEDED: draft a 2-3 sentence reply in my voice (warm, direct, no "I hope this finds you well")
- 4. If anything is time-sensitive (deadline, meeting, payment), flag it at the top with ⚠

Output as a clean table I can scan in 30 seconds:

| # | From | Subject | Class | Urgency | Suggested reply (if any) |

End with a one-line summary: "X to reply to today, Y to skim, Z to archive."

EMAILS:
[paste below]

What it looks like running.

☀ Good afternoon, Alice

You are my email triage assistant. I'm pasting in 5-10 emails I haven't replied to.
For each email, do this in order:

1. CLASSIFY into one of: REPLY-NEEDED · FYI · ARCHIVE · DELEGATE
2. RANK urgency: HIGH (today), MEDIUM (this week), LOW (whenever)
3. If REPLY-NEEDED: draft a 2-3 sentence reply in my voice (warm, direct, no "I hope this finds you well")
4. If anything is time-sensitive (deadline, meeting, payment), flag it at the top with ▲

Output as a clean table I can scan in 30 seconds:
| # | From | Subject | Class | Urgency | Suggested reply (if any) |
End with a one-line summary: "X to reply to today, Y to skim, Z to

+

Opus 4.6 

Step 1. Paste the prompt into a fresh Claude chat. Claude reads the rules and waits for your inputs.

I'm ready to triage your emails! Go ahead and paste them below and I'll get that table back to you fast.

A couple of quick options for how to get them to me:

Paste directly — just drop the email text right here in chat.

Or, if you'd like me to pull from Gmail — I have your Gmail connected, so I can search your inbox for recent unreplied threads. Want me to do that instead?

yes

Let me pull up your recent emails.

Loaded tools, used Gmail integration >

Only one unread thread came back. Let me broaden the search to catch more — including read emails that may still need a reply.

Searches for email threads from the authenticated user's Gmail account. >

Let me also check for any recent emails on your personal/AI coaching inbox, and get the full thread details on the ones that look like they need action.

Used Gmail integration >

Good — I now have enough context on all 5 threads. Here's your triage:

⚠ TIME-SENSITIVE: REB webinar registration — May 13 (5 days away)

#	From	Subject	Class	Urgency	Suggested reply
1	Réseau EB	Webinaire REB - 13 mai 2026	FYI	MEDIUM	No reply needed — decide if you want to register. Relevant to solar (RBQ guide on energy loop connections).
2	You → Jesse/William Drori (Temperguard/SSML)	Reschedule feasibility call	REFUSED ↓ NEW	HIGH	You sent the last message Apr 29 asking to reschedule and get no response in 9 days

Step 2. Claude triages your real emails into a clean table with class, urgency, and suggested replies. ≈ 60–90 seconds for 8 emails.

How to know it's working.

- ✓ **Day 1:** 8 emails triaged in under a minute. You only write 2 replies from scratch instead of 8.
- ✓ **Day 3:** You check email twice a day instead of every 20 minutes. Your "to-reply" list lives in Claude, not your head.
- ✓ **Week 2:** The "what was I supposed to follow up on?" anxiety stops. ≈ 5 hours back per week.

 **MAKE IT STICKIER**

Save the prompt as a Claude Project (Pro). Now you can paste the emails straight in without re-pasting the prompt. Add your business voice as a memory ("I run a 6-person dental practice; reply with that context") and Claude tunes drafts to your tone forever.

THE HONEST CAVEAT

Don't auto-send drafts. Read each one before clicking send. AI is good at $\approx 80\%$ of replies; the last 20% is still you reading the tone of the relationship. Five seconds per draft beats five minutes typing it from scratch.

02

WORKFLOW TWO

The SOP-to-AI-Trainer Workflow.

Stop re-explaining your business every time you talk to AI. Train it once, with a doc you already have. Reuse it forever.

SAVES ≈ 3 HRS/WEEK

SETUP: 30 MIN, ONCE

TOOL: CLAUDE.AI (PROJECTS) · PRO \$20/MO

You'll recognize this if...

- ✓ Every time you ask AI for help, you re-paste the same context (your business, your customers, your offers, your voice).
- ✓ You've asked AI for "an email like the one I sent last week" and it had no idea what you meant.
- ✓ You have an SOP doc, an onboarding guide, or a brand voice doc sitting in Google Drive you haven't opened in 4 months.
- ✓ You think "if I could just clone my business knowledge into AI once", that's exactly what this does.

The exact setup (30 minutes, once).

1. **Open Claude.ai.** Click the "Projects" sidebar (Pro feature, \$20/mo).
2. **Create a project** called "[Your Biz] Knowledge Base."
3. **Upload your existing docs:** SOP / onboarding guide / brand voice / pricing / FAQ. PDFs, Google Docs (export as PDF), or .txt all work.
4. **Paste this system prompt** in the project's "Custom instructions" box (see prompt below).
5. **Start a new chat in that project.** From now on, every message uses your docs as context automatically.

The system prompt.

► PASTE INTO THE PROJECT'S "CUSTOM INSTRUCTIONS"

You are my AI assistant for [BUSINESS NAME].

The attached docs describe how my business actually runs:
who my customers are, what I sell, my brand voice, my pricing,
my SOPs, and what I will NEVER do.

Rules for every reply:

1. Use the docs as the source of truth. If something contradicts the docs, the docs win.
2. Match my brand voice from the writing samples. Specifically:
[warm, direct, plain-language; no jargon; no "in today's fast-paced world"; no "leverage"; no "synergy"].
3. If I ask for something the docs don't cover, say so before guessing.
4. When I ask for a draft (email, post, proposal), output it ready to send/publish, not a 500-word explanation of how to write it.
5. If the request involves money, contracts, or legal, flag it and tell me to verify before sending.

What it looks like running.

☀️ Good afternoon, Alice

You are my AI assistant for Small Business AI Coach.
The attached docs describe how my business actually runs:
who my customers are, what I sell, my brand voice, my pricing,
my SOPs, and what I will NEVER do.

Rules for every reply:

1. Use the docs as the source of truth. If something contradicts
the docs, the docs win.

2. Match my brand voice from the writing samples. Specifically:
[warm, direct, plain-language; no jargon; no "in today's
fast-paced world"; no "leverage"; no "synergy"].

+

Opus 4.6

Step 1. Paste the system prompt into the Project's Custom Instructions. Claude now answers every chat in this project with your docs as the source of truth.

Got it, Alice. I've locked in those rules:

1. Your docs are the source of truth — they override anything else.
2. Voice stays warm, direct, plain-language. No "leverage," no "synergy," no filler phrases.
3. If the docs don't cover it, I'll say so before I guess.
4. Drafts come ready to send, not wrapped in explanations.
5. Anything touching money, contracts, or legal gets flagged for your review.

What are we working on?

Step 2. Claude locks in your rules and asks what you want to work on. From now on, every reply uses your business as context — no re-pasting.

How to know it's working.

- ✓ **Week 1:** Replies sound like YOU wrote them. You stop deleting AI's "I hope this finds you well" preambles.
- ✓ **Week 2:** You ask "draft a follow-up to the proposal I sent the Tuesday client" and Claude knows what you mean.
- ✓ **Week 4:** You realize you've stopped pasting context into every AI conversation. $\approx$ 3 hours/week back.

⚡ **BONUS MOVE**

Add your last 5 best-performing pieces of content (LinkedIn posts, emails, sales pages) to the project. Now Claude can write IN your voice instead of generic-AI voice. This single move is what separates "AI sounds like AI" from "people don't realize this was AI-assisted."

⚠ **PRIVACY CHECK**

Don't upload anything you wouldn't email a contractor. No client SSNs, no full credit card numbers, no medical records. Anthropic's enterprise terms cover business data, but you're still responsible for what you put in.

03

WORKFLOW THREE

The Weekly Marketing Loop.

5 reel scripts and a newsletter outline from one prompt. Built around your brand voice. Repeats every week with a single click.

SAVES ≈ 4 HRS/WEEK

SETUP: 15 MIN

TOOL: CLAUDE.AI (CHAT) · PRO \$20/MO

You'll recognize this if...

- ✓ You know you "should" be posting more, but content is the bottleneck.
- ✓ You've spent a Sunday afternoon staring at a blank doc trying to think of 5 reel ideas.
- ✓ Your last newsletter went out 6 weeks ago. You meant to write one. It just didn't happen.
- ✓ You'd rather record reels than write the scripts.

The exact prompt.

► PASTE INTO CLAUDE (OR YOUR SOP-TRAINED PROJECT FROM WORKFLOW 02)

You are my content strategist. Generate this week's content in one pass.

CONTEXT (the only thing I need to give you each week):

- This week's main topic: [TOPIC]
- The specific pain it solves for my audience: [PAIN]
- The product/offer I'm warming people up to: [OFFER]

Output, in order:

1. FIVE short-form video scripts (15–30 sec each).

Each one: a single hook line, a single beat, a single CTA.

Different angles: a confessional, a contrarian, a checklist, a story, a stat-based one.

Format each as: HOOK / SCRIPT / CTA.

2. ONE newsletter outline:

- Subject line (under 50 chars, no clickbait, no emojis)
- Opening line (1 sentence, hook)
- Body (3 short paragraphs, plain language)
- One link (to the OFFER) in the natural closing.

Write everything in MY voice (from the project docs). Plain language. No "in today's fast-paced world." No emojis in body copy.

What it looks like running.

You are my content strategist. Generate this week's content in one pass.

CONTEXT (the only thing I need to give you each week):

- This week's main topic: Saving small businesses admin time
- The specific pain it solves for my audience: time away from scaling revenue and strategy
- The product/offer I'm warming people up to: June 3rd Free webinar

Output, in order: 1. FIVE short-form video scripts (15–30 sec each).

Each one: a single hook line, a single beat, a single CTA.

Different angles: a confessional, a contrarian, a checklist, a story, a stat-based one.

Format each as: HOOK / SCRIPT / CTA.

2. ONE newsletter outline:

- Subject line (under 50 chars, no clickbait, no emojis)
- Opening line (1 sentence, hook)
- Body (3 short paragraphs, plain language)
- One link (to the OFFER) in the natural closing.

Write everything in MY voice (from the project docs). Plain language. No "in today's fast-paced world." No emojis in body copy.

① Editing this message will create a new conversation branch. You can switch between branches using the arrow navigation buttons.

Cancel

Save

Step 1. Paste the prompt with this week's TOPIC, PAIN, and OFFER filled in. The only thing that changes week to week is those 3 lines.

Alice, here's your full content kit for this week. Ready to use.

1. FIVE SHORT-FORM VIDEO SCRIPTS

SCRIPT 1 — THE CONFESSIONAL

HOOK: "I used to spend Sunday nights doing invoices."

SCRIPT: Not because I wanted to. Because I didn't know there was a better way. I was running a business and doing the admin of a full-time office manager — for free. The day I automated my invoicing, I got my Sundays back. That was the first domino.

CTA: I'm running a free webinar June 3rd on exactly how to set this up. Link in bio.

SCRIPT 2 — THE CONTRARIAN

HOOK: "Hustle culture isn't killing your business. Your admin is."

SCRIPT: You don't need another productivity hack. You need to stop doing work a robot can handle. Scheduling, follow-ups, data entry — that stuff eats 10, 15, 20 hours a week. That's not running a business. That's volunteering as your own assistant.

CTA: On June 3rd I'm showing you what to hand off first. Free webinar — link in bio.

SCRIPT 3 — THE CHECKLIST

HOOK: "Three signs your admin is eating your revenue."

SCRIPT: One — you can't remember the last time you worked ON your business, not in it. Two — your to-do list is mostly tasks, not strategy. Three — you keep saying "I'll get to that next week" about the thing that would actually grow your income. Sound familiar?

CTA: I'm breaking down the fix on June 3rd. Free webinar. Link in bio.

SCRIPT 4 — THE STORY

HOOK: "A client told me she was working 60-hour weeks and still falling behind."

SCRIPT: She wasn't lazy. She was buried. Client emails, appointment booking, chasing payments — all manual. We set up three automations in one afternoon. Two weeks later she told me she'd taken her first Friday off in a year.  That's what this work does.

CTA: Want to see what that looks like for your business? Free webinar, June 3rd. Link in bio.

Step 2. Claude returns 5 reel scripts (Confessional, Contrarian, Checklist, Story, Stat) plus a newsletter outline, all in your voice. ≈ 2–3 minutes the first run.

How to know it's working.

- ✓ **Week 1:** You record 5 reels in one sitting using the scripts. You ship the newsletter on time.
- ✓ **Week 3:** You stop "not knowing what to post." The bottleneck moves from ideation to recording.

✓ **Month 2:** Your audience starts replying "your content has been on fire lately." It has. You finally have a rhythm.

⚡ THE LEVERAGE MOVE

After every weekly run, paste your top-performing post BACK into Claude with the note "Why did this one outperform?" Over 4–6 weeks, your prompt + your project docs become a self-tuning content engine. This is also exactly what we build live in the workshop.

If you only do one of the three this week, do this one.

The Weekly Marketing Loop is the workflow most owners skip because it feels less urgent than email. It's also the one that compounds the fastest. Email saves you hours back. Marketing brings new revenue in.

If you ship 3 weeks of content using this loop, you'll have **15 reels and 3 newsletters** in the bank. That's more content than most owners ship in a quarter.

📊 THE MATH

Old way: 1 reel idea → 30 min to write the script → 20 min to record → 15 min to edit.
Roughly 90 min per reel × 5 reels = 7.5 hours/week on content alone.

New way (this loop): 2–3 minutes to generate 5 scripts → 60 minutes to batch-record → 60 minutes to batch-edit. ≈ 2 hours/week. **Saves ≈ 4–5 hours/week.**

· End of the 3 main workflows. Keep reading for the surprise bonus on the next page.

04

BONUS WORKFLOW · SURPRISE

The Invoice Killer.

For the small business owner who hand-types the same client invoice every month. Set it up once. Claude runs it on the 1st, every month, on its own.

SAVES 2–4 HRS/MONTH

SETUP: 15 MIN, ONCE

TOOL: CLAUDE COWORK (PRO FEATURE · IN DESKTOP APP)

This one's different. The first three workflows you trigger by hand. This one you set up **once**, and then **Claude Cowork** runs it on a schedule, on its own, while you sleep. Cowork is a Pro feature inside the Claude *desktop app* (not the web Chat) that lets Claude run scheduled tasks for you.

You'll recognize this if...

- ✓ You invoice the same client(s) for roughly the same services every month.
- ✓ The 1st of the month rolls around and you're cross-referencing last month's hours, services, and totals from memory or scattered notes.
- ✓ You've forgotten to send an invoice on time, more than once.
- ✓ Tax math, line items, totals, and a polished PDF, every single month, is "just admin" eating 2–4 hours.

The 15-minute setup.

1. **Open the Claude desktop app** and click the **Cowork** tab at the top (next to Chat and Code). If you don't see Cowork, update the desktop app, it ships with Pro.
2. **Create a new Project** called "Invoicing." Drop in last month's invoice PDFs and any service rate-sheet you use, so Claude has your real numbers.
3. **Paste the instructions below** into the project's Instructions panel. Edit the bracketed bits ([client name], [services], [your tax rate]) for your business.
4. **Schedule it.** In the Scheduled section, set it to run at 9am on day 1 of every month. Cowork will ask you the questions, you approve, it generates the PDF.

The exact instructions (paste into your Cowork project).

► PASTE INTO THE INSTRUCTIONS PANEL OF YOUR "INVOICING" COWORK PROJECT

Run the monthly invoicing routine for [CLIENT NAME].

Follow these steps every time:

1. Determine the invoicing month: it's the month that just ended (the previous calendar month). For example, if today is June 1, invoice for May.
2. Ask me how many hours of each service I delivered last month. List the services I offer:
 - [Service A] @ [rate]/hr
 - [Service B] @ [rate]/hr
 - [Service C] @ [rate]/hr
3. Calculate subtotal, tax at [your tax rate]%, and total. Show me the math. Wait for my approval before proceeding.
4. Once I approve, generate a clean PDF invoice with:
 - My business name, address, contact (use the rate-sheet in this project)
 - Invoice number = [PREFIX]-YYYY-MM (e.g. INV-2026-05)
 - Invoice date = today
 - Due date = today + 30 days
 - Line items, subtotal, tax, total
 - Bank/payment details from the rate-sheet
 - Polite "thanks for your business" footer
5. Save the PDF to this project as "[CLIENT]-invoice-YYYY-MM.pdf" and notify me it's ready.

Always do this on the 1st of every month. If I don't respond within 24 hours, send me a reminder.

What it looks like running, inside Claude Cowork.

Step 1 · The **Cowork** tab in the Claude desktop app. Create an "Invoicing" project here, separate from regular Chat. This is where the monthly run lives.

Step 2 · Inside the project: instructions on the right, scheduled task ("AI pro monthly invoice · day 1 of the month") wired up. Cowork runs this on its own.

Step 3 · The scheduled task itself, "Active · Next run: Jun 1 at 9:02 AM." That's the whole product. You set it up once. Cowork runs it forever.

⚠ THE HONEST CAVEAT

Cowork still asks **before sending**. It doesn't email your client without your approval, and it shouldn't. Use it as a "10-minute monthly check-in" with Claude instead of a 2-hour invoicing chore. *You still hit Send on the invoice.*

Drop your service rate-sheet, payment terms, and "how I write to clients" voice samples into the same Cowork project. Now the monthly invoice email comes out in *your* tone, with *your* rates, with *your* bank details, every single month. No edits needed.

Stack the four. Get a full day a week back.

Each workflow on its own ships a real win. Stacked, they compound:

- ✓ **Workflow 01** (Inbox Triage): ≈ 5 hrs/week back
- ✓ **Workflow 02** (SOP-to-AI-Trainer): ≈ 3 hrs/week back, *and* makes 01 + 03 + 04 better because everything runs in your voice with your context
- ✓ **Workflow 03** (Weekly Marketing Loop): ≈ 4 hrs/week back
- ✓ **Bonus 04** (The Invoice Killer): 2–4 hrs/month back, plus you stop forgetting to send them

THE CONSERVATIVE MATH

Workflow 01 (5 hrs) + Workflow 02 (3 hrs) + Workflow 03 (4 hrs) = **12 hours a week.**

Add Workflow 04 and you also reclaim 2–4 hours every month-end, on autopilot.

That's more than two full work-days reclaimed, every week, for a one-time setup of about 60 minutes total spread across a week.

The order I'd ship them in.

1. **Day 1:** Workflow 01 (Inbox Triage). Fastest setup, immediate win, builds momentum.
2. **Day 3–4:** Workflow 02 (SOP-to-AI-Trainer). The investment workflow. Sets up everything else.
3. **Day 7:** Workflow 03 (Weekly Marketing Loop). First week of content shipped on a rhythm.
4. **Day 14:** Bonus Workflow 04 (Invoice Killer). Take this on once the others are running. Don't bite off all 4 at once.

WHAT'S NEXT

Want me to wire all four into YOUR business, live?

Reading the workflows is one thing. Building them on your actual business, with your actual docs, with someone who's done it 200+ times sitting next to you on Google Meet, that's a different speed.

★ RECOMMENDED NEXT STEP · FREE

The 30-Day AI Reset for Small Business Owners.

A free 90-minute live workshop on **Wed June 3 at 7pm ET**. I run the audit on a real attendee's business and install the full 4-Workflow Stack live in front of you. Live Q&A at the end. Capped at 50 live seats. Replay only for live attendees. Live on Google Meet.

Save my seat (free) →

If the workshop tells you "yes, I want this with hands-on coaching," the next step is the paid [30-Day AI Accelerator](#) (\$1,000, weekly group coaching, 4 weeks). Don't sign up cold. Come to the workshop first.

Or just take the kit and run. No follow-up pressure. The work matters more than the funnel.
