

HOT TAKE

Your AI Sounds Like Everyone Else's. Here's the Fix.

Teach Claude your voice and connect it to your tools.

4 key insights inside →

01

The Generic Problem

Every AI is trained to sound pleasant, neutral, and slightly American.

That's perfectly fine for a random query. But it's not fine when you're trying to get real work done — in your voice, with your standards, on your material.

02

Personal AI

Teaching Claude what 'good' looks like — for you specifically.

Your tone. Your preferences. Your standards. This is subjective, and that's the point. No technical skill needed. Set it once and Claude remembers across every conversation.

03

Kill the Copy-Paste Tax

Most entrepreneurs have a copy-paste bottleneck somewhere in their AI workflow.

You grab text from one tool, paste it into Claude, copy the answer back out, paste it somewhere else. You are the middleman. And it's where the time savings leak away.

04

AI Fits How I Work

These two shifts — personalizing your AI and connecting it to your tools — are the jump from casual use to real productivity.

It's not technical. It's personal. And it takes 30 minutes to set up with someone who knows how.
